

CARE & MAINTENANCE OF YOUR LAMINATE FLOOR

The first time:

- Remove all dirt and dust with a soft brush or vacuum cleaner with a soft parquet brush
- Clean the floor with a dry dust cloth
- Replace the dust cloth and clean again
- Remove any remaining dirt with a pH neutral recommended laminate cleaner (bona floor cleaner)
- Replace the dust cloth with a slightly damp cloth and clean again
- If necessary, repeat the slightly damp cleaning process

Daily use: dry cleaning.

- Use a vacuum cleaner with a soft parquet brush or dry electrostatic dust cloths that attract dirt, dust and hair like a magnet.
- Work the floor cleaner lengthways along the panels, in an overlapping zigzag motion and with long strokes across the floor.

Intensive use: slightly damp cleaning.

Wet cleaning is not recommended, because it can cause lasting damage to your floor.

- Clean your laminate flooring with a well wrung out cloth instead
- Work the cloth lengthways along the panels, in a fluent zigzag motion across the floor, without applying pressure
- Clean the surface thoroughly with a clean cloth (cotton/towelling) and remove any puddles immediately

Stains from normal use, scuff marks from shoes, pencil marks and dirt stains are all easily removed without trace.

What to do in case of:

Cause > Solution

Greasy stains: may occur after cleaning as certain cleaning products can leave an oily residue (film) on the floor. We recommend to mix +/- 50 ml of mentholated spirits in a bucket of clean water (5-8 litre) and mop the laminate with a well-wrung cloth (see instructions for intensive use). In case of a persistent residue, this will have to be repeated several times.

Rubber marks, scrapes or scuffs from shoe heels, dirt, pencil or crayon marks: use a dust cloth.

Fruit, berries, milk, beer, wine, tea, soft drinks: wipe off immediately with an absorbent cloth - or with a damp cloth if it has already dried in - and rub dry.

Blood, urine: remove immediately with a damp cloth and wipe off any remaining dirt with the recommended laminate cleaner.

Nail polish, shoe polish, varnish, ink, make-up, felt pen: remove with a drop of acetone on a clean cloth which you should apply on the stain only; follow the safety instructions that come with the product used.
